

# Why I Chose Clovis

**Eric Johnson**  
**AT&T**

No doubt about it: Clovis is wired.

From the new 60,000-square-foot AT&T support facility in Clovis to services planned for the new Central Valley Research and Technology Business Park, this community is wired to provide customers with the latest in telecommunications capabilities.

"Clovis is an emerging market for business and AT&T is committed to providing advanced telecommunications products and services to the area," explained AT&T spokesman Eric Johnson. In fact, Johnson said, the area is wired for many new high-tech applications that can compete with any community in the country.

"High-capacity services are especially important," said Johnson, "and AT&T can deliver advanced technologies including T1, T3, and even DS3, which are fiber optical carriers."

Johnson noted the area is one of the first of five in the state to offer GigaMAN services that allow data to move at speeds up to a billion bits per second.

AT&T employees, furthermore, have the training and expertise needed to provide customers with assistance with the latest in telecommunications technologies. The company's commitment to Clovis is also demonstrated in its recent pledge of \$250,000 in cash and support to the Center for Advanced Research and Technology, a first of its kind, technology-career oriented senior high school in Clovis. The company also has been a part of the Clovis Chamber of Commerce for 75 years and is a charter sponsor of the Leadership Clovis program.
